tenzin [2 (2 / 0)]	3
tenzin-config [6 (6 / 0)]	3
xdr-provisioning [5 (5 / 0)]	3

Individual Development Plan

Results

Accomplishments

- Added support for AND/OR queries in tk-store. Should help
- PIAM (Provisioning)
- Start of the work related to Entitlements (see: <https://github.com/advthreat/iroh/issues/7835>)
- Free Tier Provisioning (the xdr-provisioning repository + Platform Provisioning API)
- IROH config work to help ops and prevent release problems
- Recurring admin tasks:
 - added bunch of XDR Flags (see [#response/1742](#))
 - moved the TG OAuth2 client from config to DB on INT
- Managed to get Wanderson back to better efficiency after being difficult during its move and his daughter
- Managed Olivier to his best. Very discrete but pretty strong.

For full details look at the code last quarter report section.

Improvements/opportunities for development:

- I should work even more closely with PIAM as this is fruitful and could have a lot of impact on IROH team as well as the rest of the IROH ecosystem (IROH + modules + integrations).
- Entitlement will be an interesting topic
- Wanderson and Olivier are not yet fully autonomous while working with some IROH-Auth parts. So there are still room for teaching and improvements.

Principles & Behaviors

Accomplishments

- Advocate: even while it was questionable I did my best to provide only positive XDR feedback to the team.
- Customer value: see the Results Accomplishments section (most of them add customer value)
- Learn:
 - bash scripts containing Clojure
 - matrix testing (this was not very visible PR but this is a testing framework improvements)
 - matrix representation inside Clojure code, this is helpful to visualize and easily change scopes associated to roles for example.
- Team for results: engaged team ops + Matt + IROH-Auth for iroh config issue

Improvements/opportunities for development:

Team Impact

Accomplishments

- admin-clj scripts should be helpful, for now use only for
- IROH default config should help ops
- PIAM contacts will be useful in the future
- Mario PR feedback was a really nice exchange while we are not having much cross-sub-team discussions.
- Helped Explain RBAC technical consequences with other teams, in particular SXO, but also the UI.

Improvements/opportunities for development:

- RBAC: Next quarter will probably start discussions with DI and perhaps CSC.

Code last quarter [44]

ctia [1 (1 / 0)]

- bump snakeyaml to address CVE-2022-38751 [#1346](#)

iroh [30 (27 / 3)]

- Add a missing option to disable default configs [#7805](#)
- Add a script to init tokens without login in [#7794](#)
- Fix schema for Response [#7804](#)
- Add support to onboard a single app [#7796](#)
- Add a role introspection route to help the UI and other clients [#7785](#)
- Fix scopes declaration for execute-workflow route [#7799](#)
- Fix a Swagger bug due to schema name conflict [#7790](#)
- Web api search improvements [#7728](#)
- add profile and notification to ao-jwt [#7726](#)
- Tk store combinator search queries (AND, OR, NOT) [#7691](#)
- Fix a case where the body is nil [#7685](#)
- Add xdr-instance-id field to the orgs [#7707](#)
- PIAM: Provisioning onboard endpoint [#7659](#)
- Add ff scope script [#7680](#)
- added a script to add feature-flag scopes from command line [#7676](#)
- prefer to use client from DB than client from config [#7672](#)
- Align scopes to SXO behaviour [#7673](#)
- fix lein start [#7663](#)
- PIAM provisioning no idp-mapping for create user [#7655](#)
- Default bootstrap & config [#6868](#)
- Add Entitlements to Orgs [#7631](#)
- Remove yaml to supported format for profile API [#7632](#)
- Fix a flaky test in either_test.clj [#7610](#)
- Role Matrix representation in the code. [#7583](#)
- fix some wording only for admin users view [#7579](#)

- Improve User login logs situation [#7555](#)
- Added a composable redis.nix [#7535](#)

between 3 and 4 months ago

- Fix template rendering during invite confirmation [#7480](#)
- Display virtual users in the batch get users [#7473](#)
- Add the UI session logout into IROH-Auth [#7431](#)

tenzin [2 (2 / 0)]

- use iroh.main for all nodes types [#2862](#)
- Update iroh.job.jinja [#2861](#)

tenzin-config [6 (6 / 0)]

- fix missing iroh-async web-services [#884](#)
- align iroh and iroh-async confs [#883](#)
- Add CSC onboarding URLs [#875](#)
- fix provisioning service [#863](#)
- PIAM config change (+ bootstrap cleanup) [#677](#)
- add perf.orbital.threatgrid.com to allowed login origin [#854](#)

xdr-provisioning [5 (5 / 0)]

- Improve help regarding setting env vars
- Improve the command line parsing
- rename script to .sh
- Add onboarding of DI and CSC
- Initial provisioning Script
